

Here's a complete scope proposal based on your requirements:

Project: 24/7 Website Monitoring System with Discord Bot

Scope of Work:

I will develop a reliable monitoring system integrated with a customizable Discord bot that allows you to manage up to 3 websites in real time.

Core Features:

- Continuous website monitoring (10–30 second intervals for up to 3 sites)
- Detection of:
 - Website downtime / availability issues
 - Full-page content changes (via hashing)
- Instant Discord notifications when a change is detected

Discord Bot Functionality:

- /add — start monitoring a website
- /remove — stop monitoring
- /list — display all active monitored sites
- Clean and clear notification messages sent directly to your selected Discord channel

System Design:

- Async monitoring engine for fast and efficient checks
- Optimized request handling to reduce risk of rate limiting
- Persistent storage (to track sites and last known state)
- 24/7 deployment on a cloud server

Performance & Reliability:

- Designed specifically for small-scale fast monitoring (max 3 sites)

- Smart request handling to minimize blocking risks
- Stable long-running process suitable for continuous operation

Delivery Timeline:

- Total: 7 days
 - Day 1–2: Core monitoring engine
 - Day 3–4: Discord bot integration
 - Day 5: Change detection + notifications
 - Day 6: Testing & optimization
 - Day 7: Deployment + final delivery

Deployment:

- Assistance with setup on a cloud server (e.g., DigitalOcean / AWS if needed)
- Guidance on running and managing the bot

Budget:

- Total Cost: \$300 USD

If everything looks good, I can get started right away. Let me know if you'd like any additional features (like specific element tracking or logs/history), and I can include those as well.

Looking forward to working with you
